

AROMA

I. Takahashi, K. Tsunashima, T. Shiraki,
T. Kojima and A. Yoshida (AGU) ,
Y. E. Nakagawa (RIKEN)

Agenda

- AROMA
- AROMA-W
- Real-time analysis
of AROMA-W
- Future plan
- Conclusion

- AROMA

AGU Robotic Optical Monitor for Astronomical objects

Two kinds of remote observation instruments

Follow-up 30 cm telescope
AROMA-N (Narrow)

Wide-field monitor
AROMA-W

AROMA-W (AROMA - Wide field)

- Wide-field monitor using multiple DSRLs
- Observed objects :
 - ✓ GRB optical emission
 - ✓ Variable stars
 - ✓ SNe, Novae
 - ✓ Comets
 - ✓ Meteors

etc.

- It is possible to observe by eight cameras now.

CANON EOS 5D
+ EF200mm F2.8USM

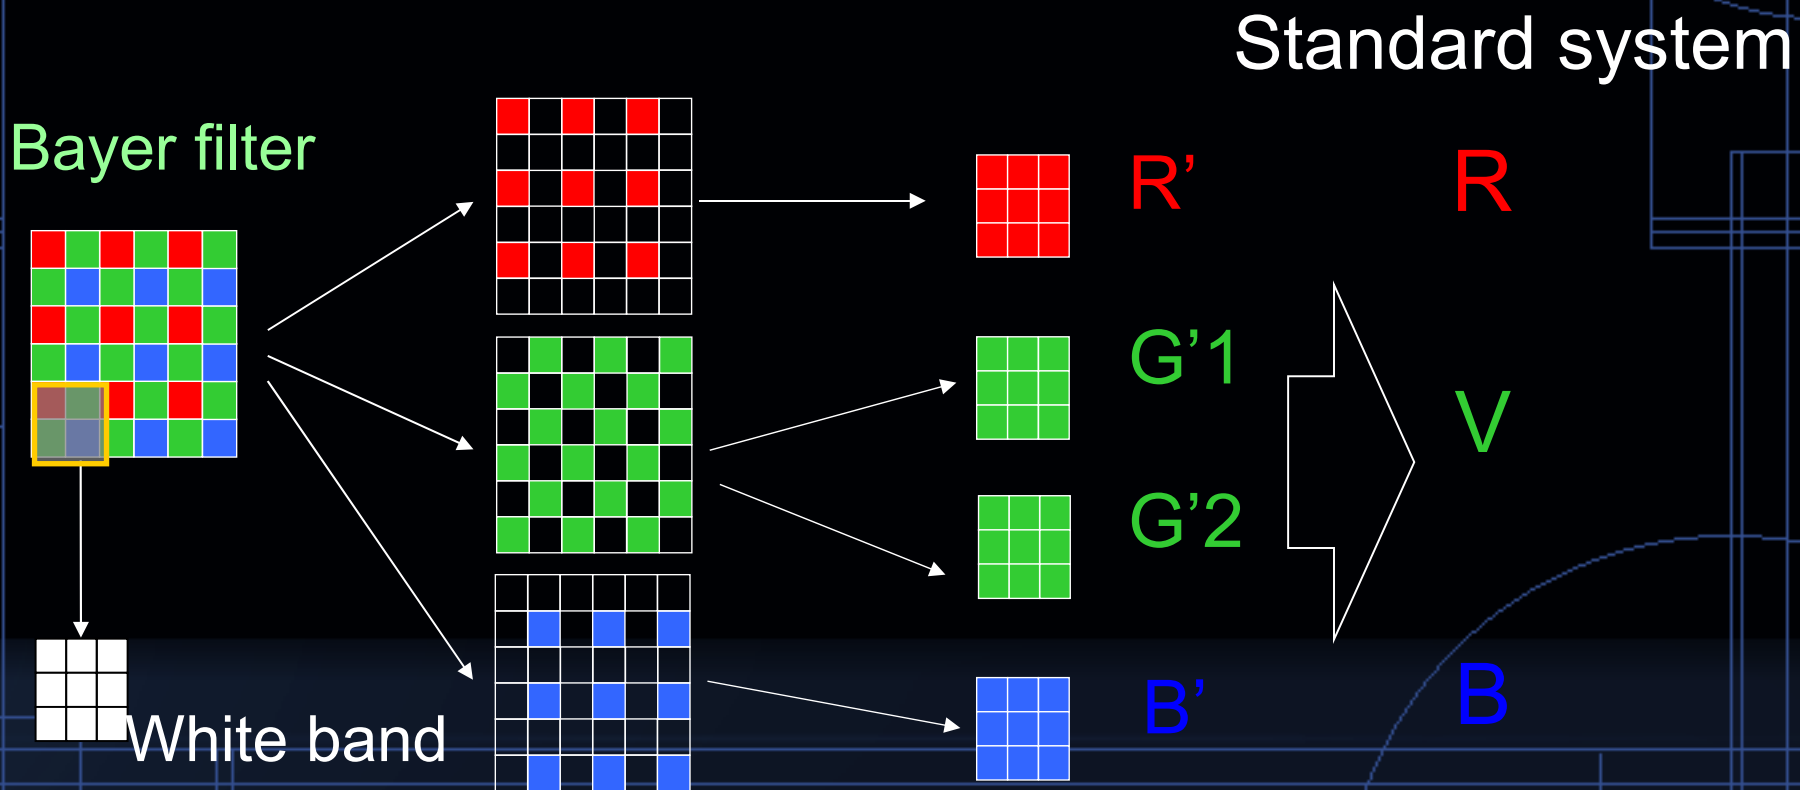

×1

CANON EOS 350D (EOS Rebel)
+ EF100mm F2.0USM

×7

Tri-color imaging and photometry

Tri-color resolution

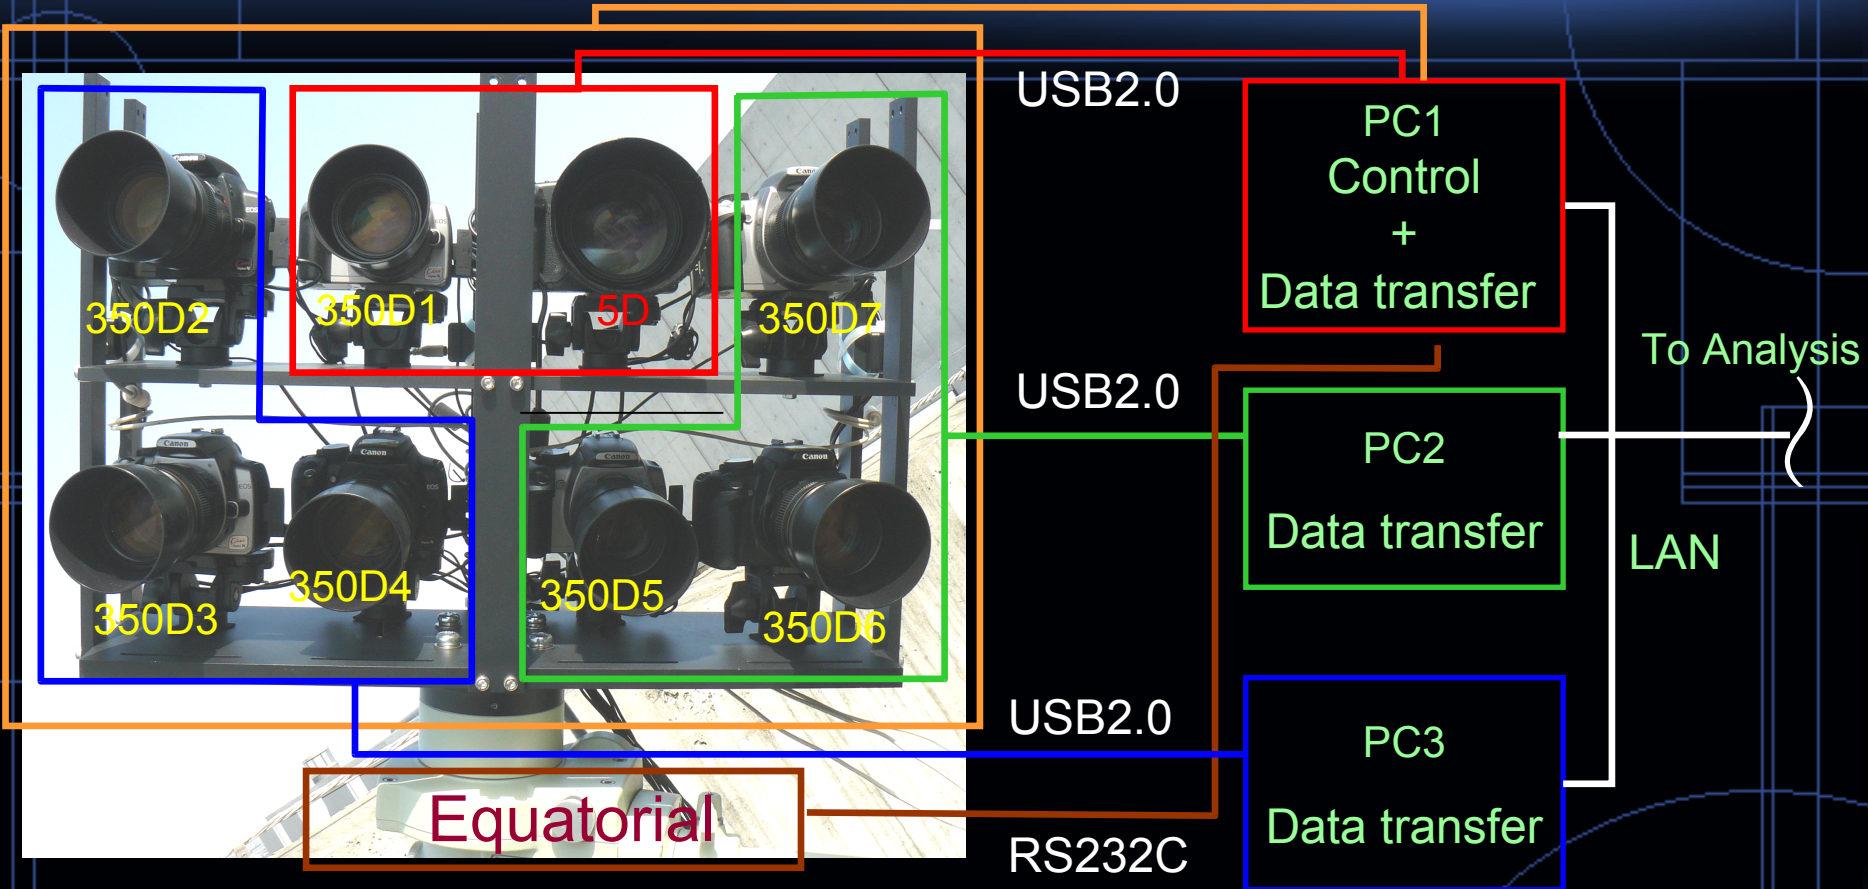

AROMA-W

Hardware Performance

- Control technique
- Field of view
- Limiting magnitude

Control technique

Shutter control

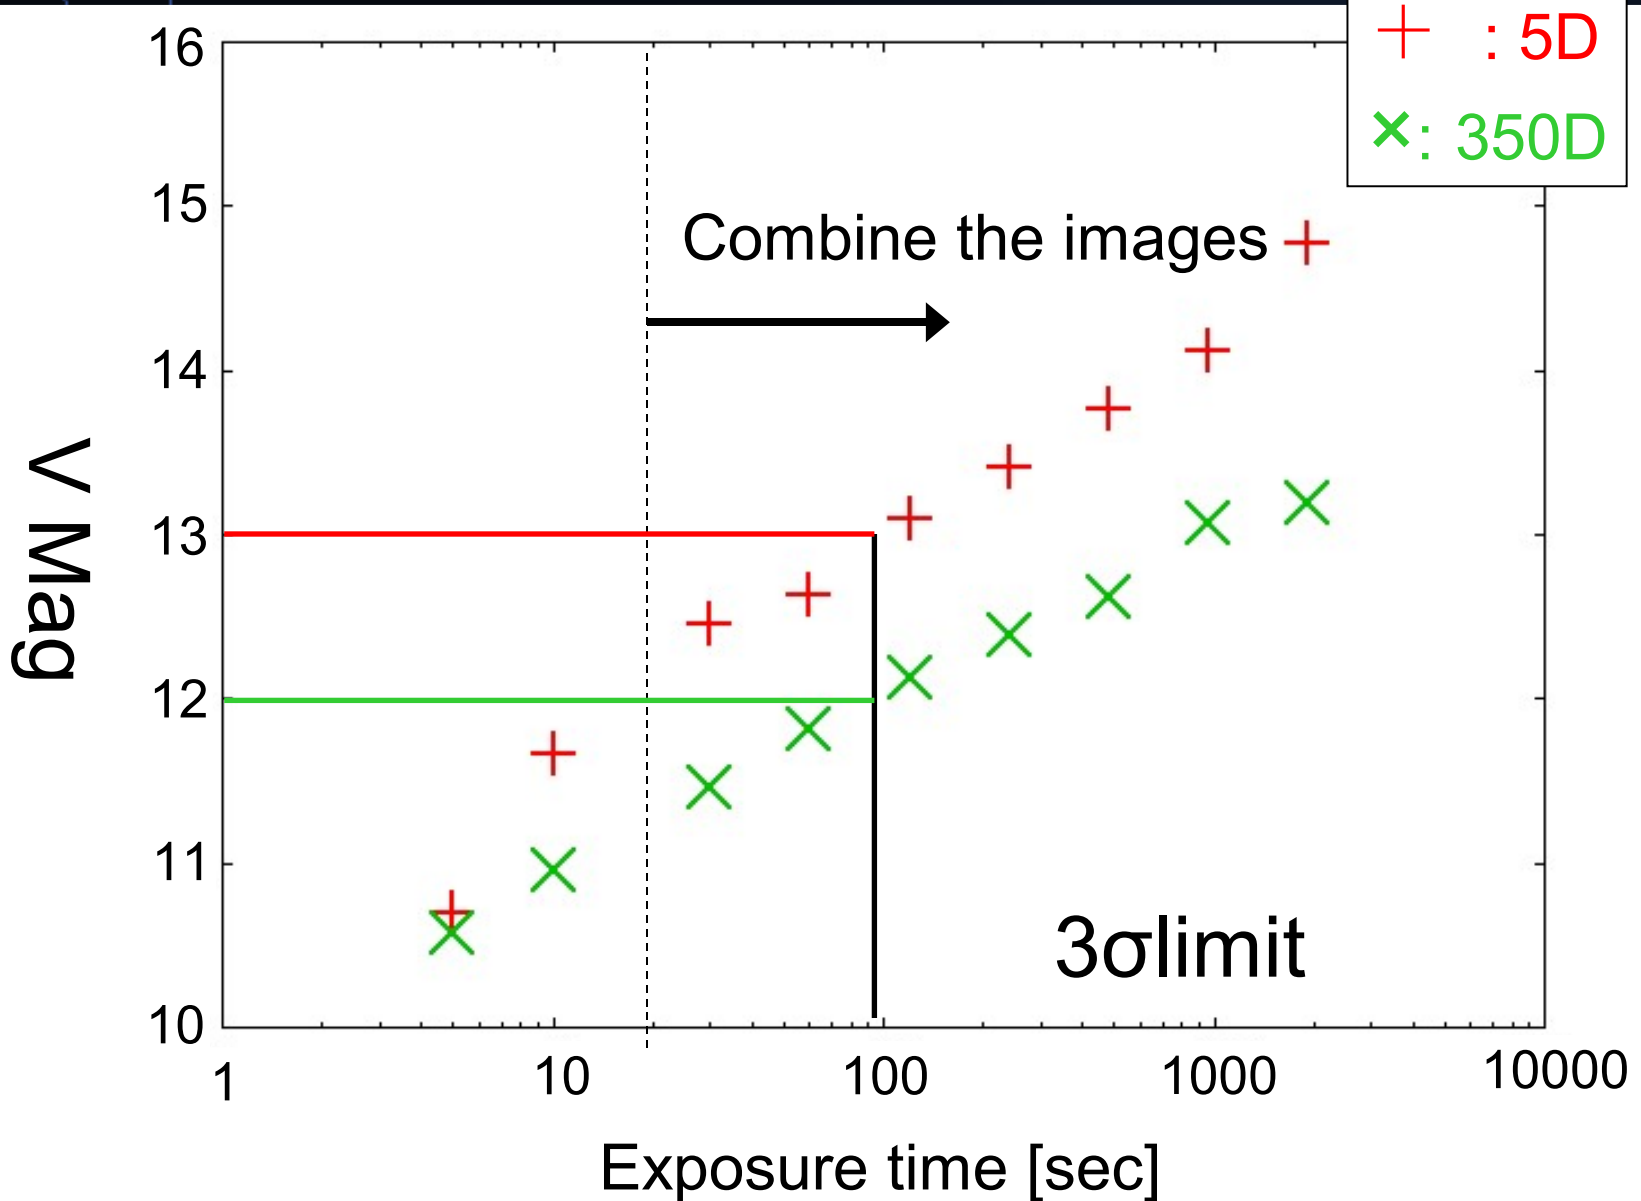

- There are 3 PCs for control and data taking
- Each PC gets data from 2 or 3 cameras
- The acquired data are sent to analysis PC frame by frame

Field of view of AROMA-W

- A mosaic of the FOV of each camera

Limiting Magnitude

Real-time analysis of AROMA-W

- Analysis pipeline
- How to search OT
- How to search variable star
- Examples of detected

Analysis pipeline

Data transfer

CF Memory in DSRL

Transfer PC

Analysis PC

Image processing

RAW to FITS
conversion

Data reduction

Tri-color resolution

Positional
correction

Analysis

Star detection

Selection of
comparison star

Make Star positional list

Photometry

These processes are automated, and run in parallel with the observation.

How to search OT

Analysis

Current list

New list

Star
detection

Selection of
comparison
star

Making of star
positional list

Photometry

comparing

Search Brightening OTs

Photometry
based on the list

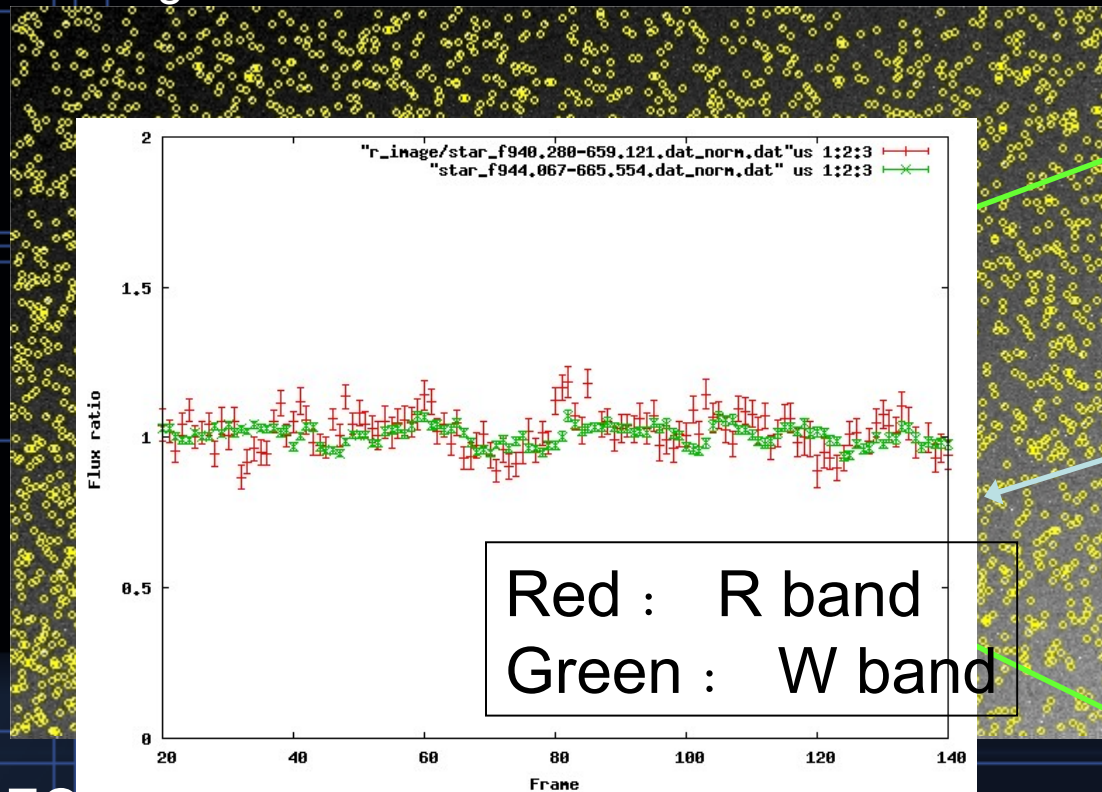

Search fading stars

How to search variable star

AROMA-W monitor the luminosities of all the objects in the F.O.V.

5D image

Threshold : 1.5σ 4 pixels over
 ~ 5000 objects

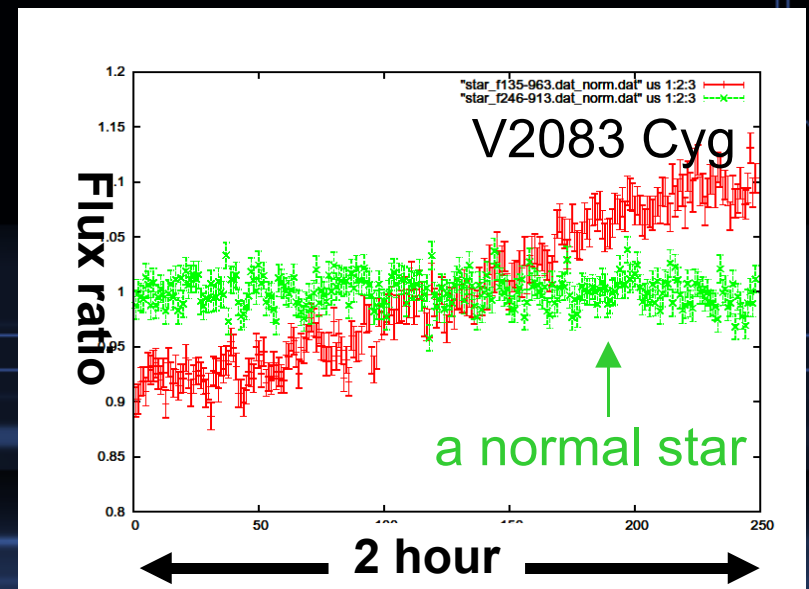

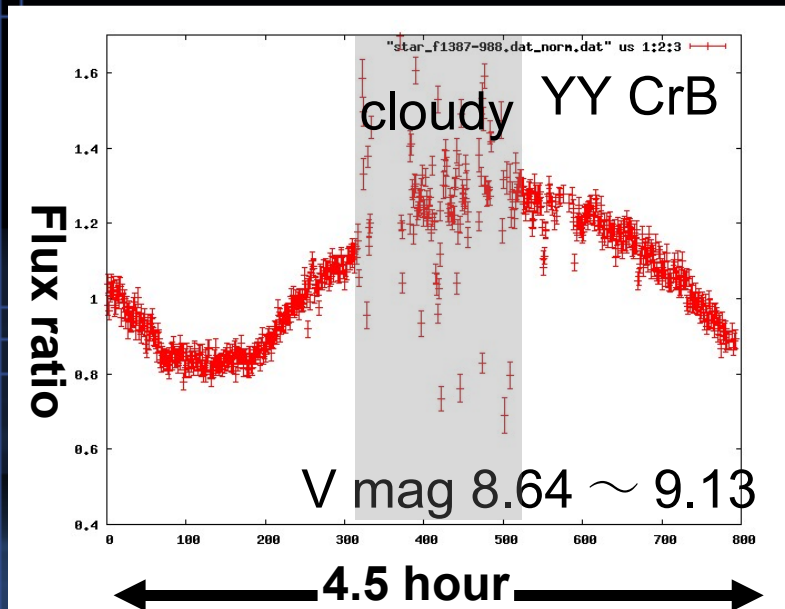

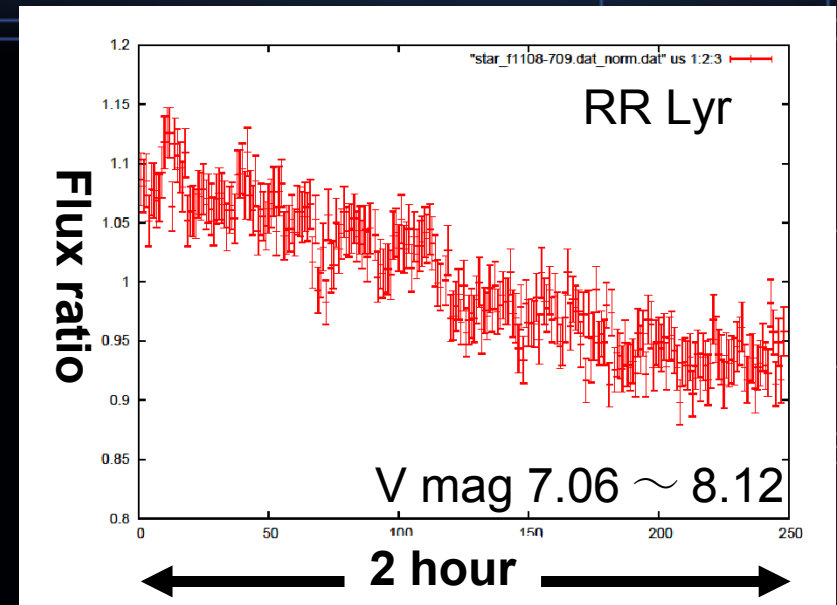

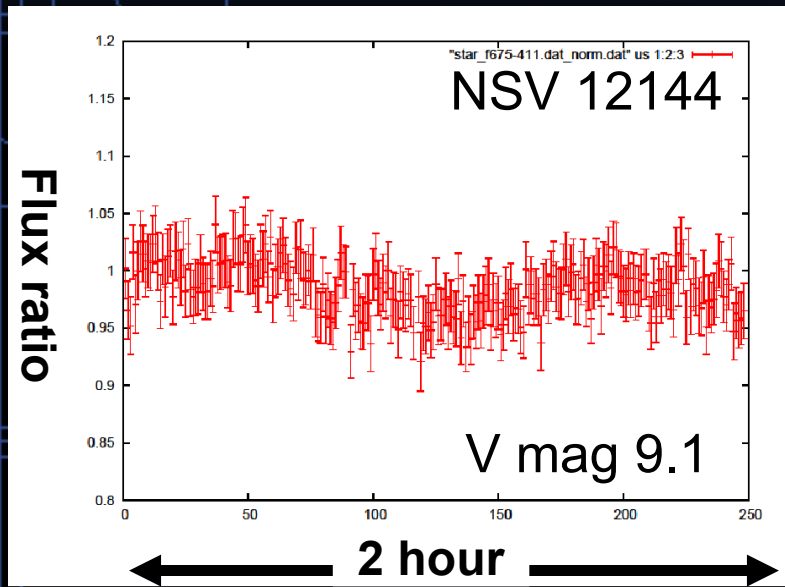

EOS 5D + EF 200mm 20sec

By monitoring these light curves

Search variable stars

Examples of variable stars which were detected

Future plan

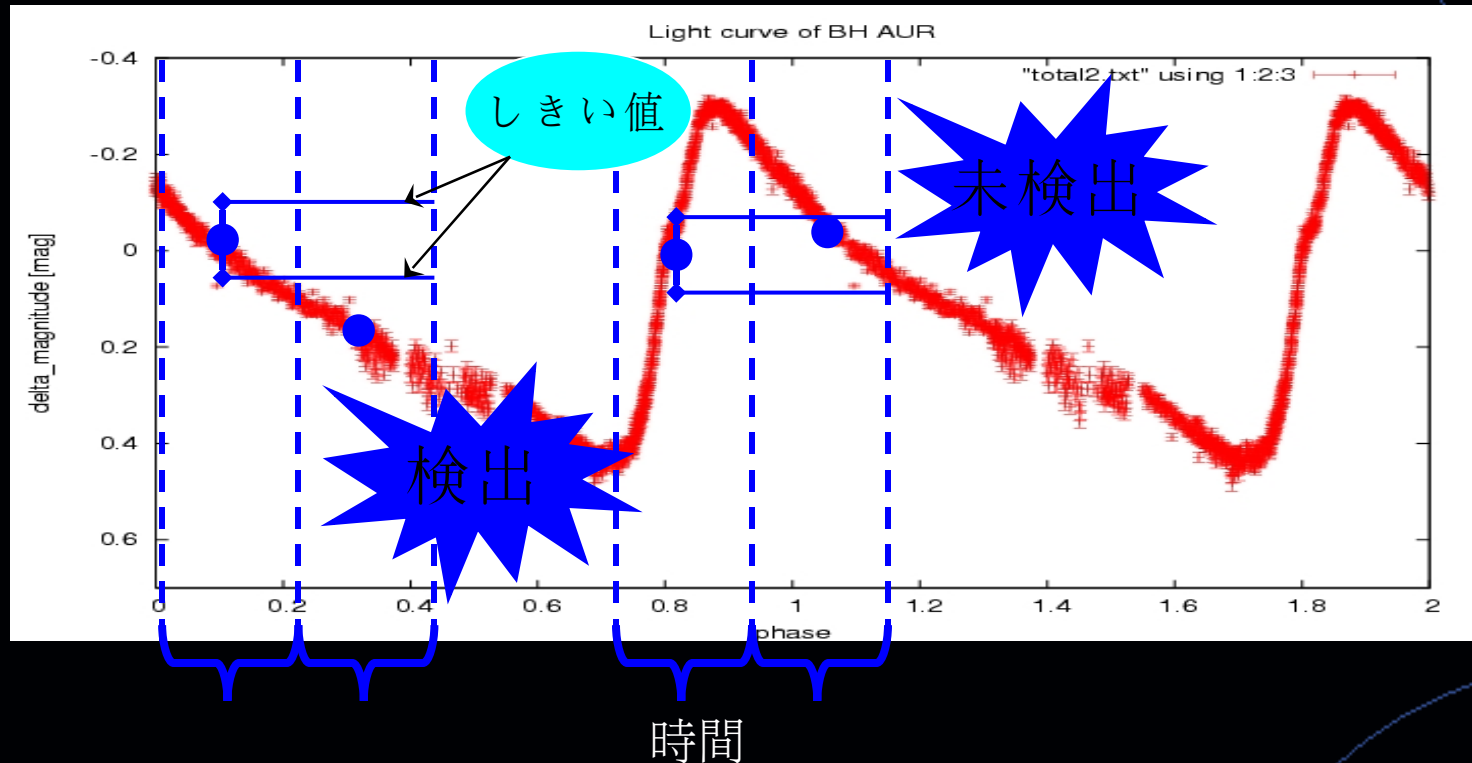

- Starting main observation of AROMA-W
- Improvement automatic analysis system
- Making of data archive
- Start up the AROMA website
- Coordinated observation of AROMA-N and AROMA-W

Conclusion

- AROMA is Robotic Optical Monitor system
- AROMA-W is a wide-field observation monitor using multiple DSRLs
 - F.O.V. : $\sim 35^\circ \times 25^\circ$
 - Limiting mag : 12 \sim 13 mag (100sec, 3σ)
- Real-time analysis algorithm is being developed
- AROMA-W monitor the luminosities of all the objects in the F.O.V.
- We succeeded in detection of many variable stars

変光星の検出 (2)

フラックス比

- 一定フレーム数ごとに Flux 比の加重平均を計算
- 基準フレーム範囲における標準偏差からしきい値を決定
- 決定したしきい値を基に変光を判断する
